

NIH Clinical Center Nursing Department Leadership Positions 06/10/13-06/19/13

Supervisory Clinical Nurse GS-14 (Hematology, Oncology, Transplant) Senior Nurse Manager, 3NE Hematology, Oncology Transplant

This senior-level supervisory nursing leadership position is located at the National Institutes of Health (NIH), Clinical Center (CC), in the Department of Health and Human Services (HHS). The position reports directly to the Service Chief for Oncology and Critical Care and serves organizationally as the Senior Nurse Manager for Hematology, Oncology and Transplant program of care, overseeing clinical research nursing services for the 3NE hematology, oncology transplant inpatient unit. The position is also charged with developing a strategic plan to assure the availability of outstanding hematology and transplant nursing services for participants in clinical research studies on the NIH campus in Bethesda, MD.

The CC leads the nation in implementing a specialty practice model for Clinical Research Nursing which defines the roles and contribution of nurses providing care to research participants. The hematology, oncology transplant program at the NIH conducts clinical research designed to improve patient outcomes utilizing transplantation as a treatment for lymphoma, leukemia, multiple myeloma, sickle cell anemia and severe aplastic anemia. The connection in both directions, between bench science and clinical research at the bedside on the transplant unit has a strong track record in innovative patient care, testing new therapies and treating not only the disease but also the cancer patient and family. If you want to play a significant role leading the vision for hematology/oncology research nursing at the NIH Clinical Center, then consider joining our leadership team!

The ideal candidate will possess prior experience leading a research-intensive oncology transplant program at the manager or director level, including designing care delivery systems to meet the unique needs of oncology populations, determining resource requirements, and supporting a research-intensive practice environment. The candidate will demonstrate a strong alignment with stakeholders and engagement beyond organizational boundaries to influence specialty practice development. The ideal candidate will possess a master's degree in nursing or health care administration.

Supervisory Clinical Nurse GS-14 (Immunotherapy, Medical and Surgical Oncology) Senior Nurse Manager, 3NW Immunotherapy, Medical and Surgical Oncology

This senior level supervisory nursing leadership position is located at the National Institutes of Health (NIH), Clinical Center (CC), in the Department of Health and Human Services (HHS). The position reports directly to the Service Chief for Oncology and Critical Care and serves organizationally as the Senior Nurse Manager

for the Immunotherapy, Medical and Surgical Oncology program of care, overseeing clinical research nursing services for the 3NW medical-surgical oncology inpatient unit. The position is charged with developing a strategic plan to assure the availability of outstanding medical, surgical oncology and immunotherapy nursing services for participants in clinical research studies on the NIH campus in Bethesda, MD.

The CC leads the nation in implementing a specialty practice model for Clinical Research Nursing which defines the roles and contribution of nurses providing care to research participants. The immunotherapy, medical and surgical oncology program at the NIH conducts clinical research designed to improve patient outcomes utilizing innovative cell transfer therapies, surgical thoracic, urologic and endocrine cancer intervention, cutting edge medical therapy for solid tumors and immunotherapy for the treatment of melanoma. The connection in both directions, between bench science and clinical research at the bedside on the medical-surgical oncology unit has a strong track record in innovative patient care, testing new therapies and treating not only the disease but also the cancer patient and family. If you want to play a significant role leading the vision for oncology research nursing at the NIH Clinical Center, then consider joining our leadership team! The ideal candidate will possess prior experience leading a research-intensive medical-surgical oncology program at the manager or director level, including designing care delivery systems to meet the unique needs of surgical oncology populations, determining resource requirements, and supporting a research-intensive practice environment. The candidate will demonstrate a strong alignment with stakeholders and engagement beyond organizational boundaries to influence specialty practice development. The ideal candidate will possess a master's degree in nursing or health care administration.

Supervisory Clinical Nurse GS-14 (Critical Care)
Senior Nurse Manager 3SW-S Critical Care

This senior level supervisory nursing leadership position is located at the National Institutes of Health (NIH), Clinical Center (CC), in the Department of Health and Human Services (HHS). The position reports directly to the Service Chief for Oncology and Critical Care and serves organizationally as the Senior Nurse Manager for Critical Care, overseeing clinical research nursing services for the medical-surgical intensive care unit providing care to patients of all ages. The position is charged with developing a strategic plan to assure the availability of outstanding critical care nursing services for participants in clinical research studies on the NIH campus in Bethesda, MD.

The CC leads the nation in implementing a specialty practice model for Clinical Research Nursing which defines the roles and contribution of nurses providing care to research participants. The medical-surgical intensive care unit provides care for adult and pediatric research participants from multiple institutes throughout the CC. State of the art critical care services support the research care needs of patients with life threatening complications of immunosuppression, multi-system failure, sepsis and surgical intervention. If you want to play a significant role leading the

vision for critical care research nursing at the NIH Clinical Center, then consider joining our leadership team!

The ideal candidate will possess prior experience leading a critical care program at the manager or director level, including designing care delivery systems to meet the unique needs of critical care populations, determining resource requirements, and supporting a research-intensive practice environment. The candidate will demonstrate a strong alignment with stakeholders and engagement beyond organizational boundaries to influence specialty practice development. The ideal candidate will possess a master's degree in nursing or health care administration.
