

Have you been diagnosed with Fanconi Anemia?

Fanconi anemia is a rare genetic disorder that mostly affects children and often leads to bone marrow failure. Researchers at the National Institutes of Health (NIH) are studying if eltrombopag can help increase your blood counts and reduce bone marrow failure.

Eligible participants:

- At least 4 years old.
- Have been diagnosed with Fanconi anemia by genetic testing.
- Have declined or not responded to treatment with danazol or oxymetholone.

What is involved?

- A review of medical records, and physical exam to determine eligibility for the study.
- Participating in the study may last up to 3.5 years.
- Participants with improvement in their blood cell counts at 6 months will have the option to continue taking the medication for an additional 3 years.
- You may receive blood and or platelet transfusions.
- Tests, medication, and procedures conducted at the NIH Clinical Center are at no cost to you.
- Compensation for travel may be provided.

The NIH Clinical Center is America's Research Hospital is located in Bethesda, Maryland, on the Metro red line (Medical Center stop).
